GETTING THE MOST FROM YOUR GOAD CATEGORY REPORT

Each shopping centre has its own unique mix of multiple outlets, independent shops, convenience and comparison stores, food outlets and vacant premises.

Understanding the retail composition of a centre and its effect on local consumers is crucial to the success of any business. By studying the information in the report, you will be able to examine site quality, evaluate threats opportunities, and assess the vitality and viability of the centre. However, you will only achieve this if you are aware of the various implications of the data that you see. This guide is designed to help you interpret the information you see on the Goad Category Report.

1. The Local Area

When evaluating the quality of a site, it is often beneficial to compare it with other local shopping centres. Category Reports are available for the majority of retail centre that we map.

2. The Indexing System

A simple indexing system appears throughout the report. This illustrates the difference between a percentage figure for the centre and the UK average. An index of 100 represents an exact match, anything less than 100 indicates a below average count for the centre, and a figure over 100 represents an above average count.

For example, if restaurants accounted for 10% of a centre's outlets and the UK average was also 10%, the index would be 100. If however, the UK average was 8%, the index would be 125.

The index is an effective gap analysis tool and can be used to identify areas that are under and over represented within a centre. A retail category that is heavily under represented could indicate poor local demand. On the other hand, it could show that there is an untapped market waiting to be serviced. Either way, it provides a strong indication that the site will need to be examined further.

3. Floor Space

The floor space figures shown on the report are derived from the relevant Goad Plan, but only show the footprint floorspace, and the site area without the building lines. They should not therefore be read as a definitive report of floor space, but do provide a useful means of

comparison between centres, as all outlets are measured in a consistent manner.

4. Vacant Outlets

Comparing the number of vacant outlets with the GB average provides a useful insight into the current economic status of a centre. For example, a high index generally represents under-development or decay, while a low index shows a strong retail presence.

5. Multiple Outlets/Major Retailers

A multiple retailer is defined as being part of a network of nine or more outlets. The presence of multiple outlets can greatly enhance the appeal of a centre to local consumers. The strong branding and comprehensive product mix of retailers such as Marks & Spencer, Boots and HMV are often sufficient in itself to attract consumers to a centre. 30 national multiples have been identified as Major Retailers, (i.e. those retailers most likely to improve the consumer appeal of a centre).

The presence of multiple outlets and major retailers can have a significant impact on neighbouring outlets. While other retailers will undoubtedly benefit from increased pedestrian traffic, (and therefore increased sales opportunities), multiples provide fierce competition for rivals in their retail categories.

The Goad Centre Report

This defines the retail extent and composition of a centre; showing the number of premises in over 27 retail categories and detailing the space allocation across each of them. A comparison of these figures with the national average illustrates under or over representation by category, allowing you to assess the degree of competition or opportunity within the centre.

The Goad Distribution Report

Goad Distribution Reports provides a top-level analysis of the total retail mix and composition of a centre. It shows the number of premises in 16 categories and details the space allocation across each of them.
